Effective weed management program

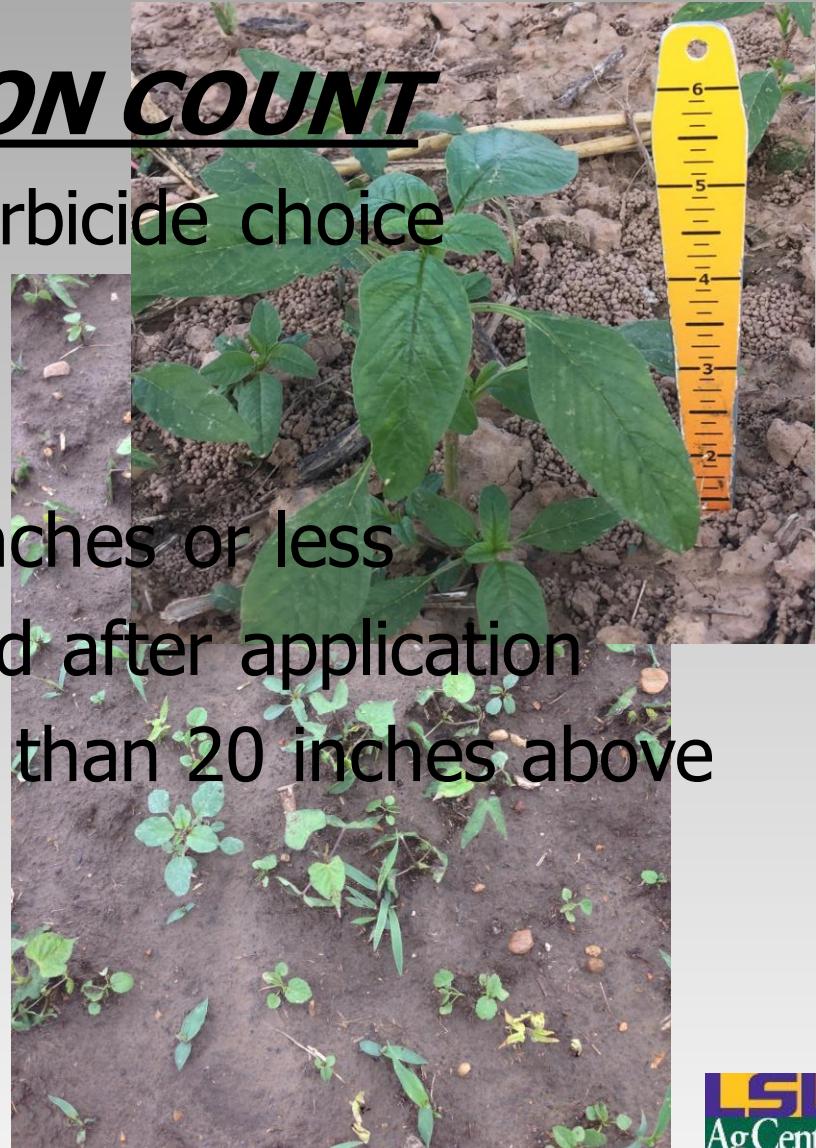

- Herbicide resistant weeds has shown the requirement for
 - Multiple SoA's per application and per season
 - Use of residuals is a must
 - No tolerance for escapes

Effective weed management program

- **MAKE THE APPLICATION COUNT**

- Weed spectrum dictates herbicide choice
- Correct herbicide rate
- Proper GPA
- Apply to small weeds – 4 inches or less
- Apply when weather is good after application
- Nozzles should be no more than 20 inches above target

Effective weed management program

Take home point:
Residual herbicide PRE
followed by
Residual + nonselective POST
