 When registering a pesticide or reassessing the potential ecological risks from use of a currently registered pesticide, EPA evaluates extensive environmental fate and toxicity data to determine how a pesticide will move through and break down in the environment and whether potential exposure to the pesticide will result in adverse effects to wildlife and vegetation.

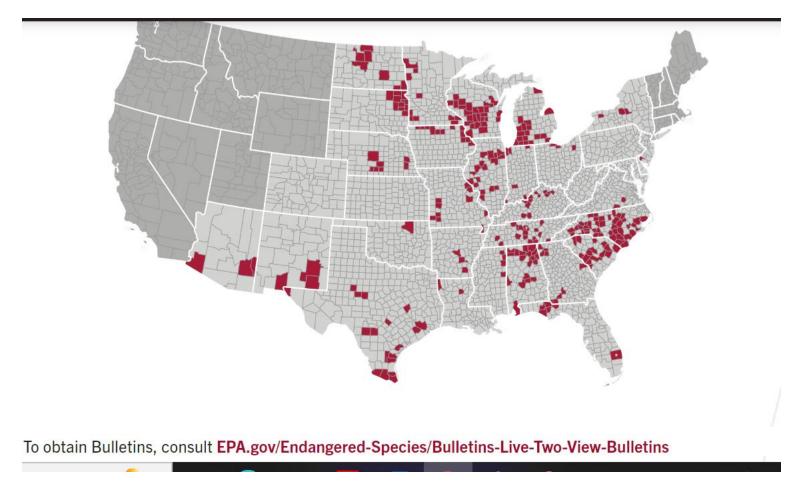

- The result of an assessment to determine potential effects of a pesticide's registration to a listed species will result in one of two determinations:
- The pesticide's registered use will have "no effect" on the species or designated critical habitat,
- The pesticide's registered use "may affect" the species or designated critical habitat.

- If EPA determines the pesticide "may affect" the species it refines its assessment to determine whether the pesticide's use:
- "may affect, but is not likely to adversely affect" the species or designated critical habitat; or
- "may affect and is likely to adversely affect" the species or designated critical habitat.

• The list of endangered species is really being looked at when it comes to pesticides being used in those areas.

 Just a heads up for those producers with land in Endangered Species areas.

EPA Pollinator Protection

Importance of Pollinators

- Many types of plants, including fruit and vegetable crops, depend on animals for pollination. In addition to honey bees, many other types of animals pollinate crops and wildflowers, including:
- Wild bees.
- Ants.
- Beetles.
- Wasps.
- Lizards.
- Birds.
- Bats.
- Butterflies.

(a) State-Limited-Use Pesticides Defined by Active Ingredient.

(1) Except as provided by paragraphs (3) - (4) of this subsection and because of their high potential to cause adverse effects to non-target sites a pesticide product containing an active ingredient in the following list is classified as a state-limited-use pesticide and subject to the restrictions listed in paragraph (5) of this subsection, as well as all other provisions of law generally applicable to state-limited-use pesticides.

(A) 2,4-Dichlorophenoxyacetic acid (2,4-D); including acid, amine, choline, ester and salt formulations;
(B) 2,4-Dichlorophenoxy butyric acid (2,4-DB);
(C) 2,4-Dichlorophenoxy propionic acid (2,4-DP);
(D) 2-Methyl-4-Chlorophenoxyacetic acid (MCPA);
(E) 3,6-Dichloro-o-anisic acid (dicamba); including dimethylamine salt (DMA), sodium salt, diglycoamine salt (DGA), isopropylamine salts (IPA), N, N-Bis-(3-aminopropyl) methylamine (BAPMA), and potassium salt;

2020 Fiscal Year

- 201 Ag Complaints
- TDA has:

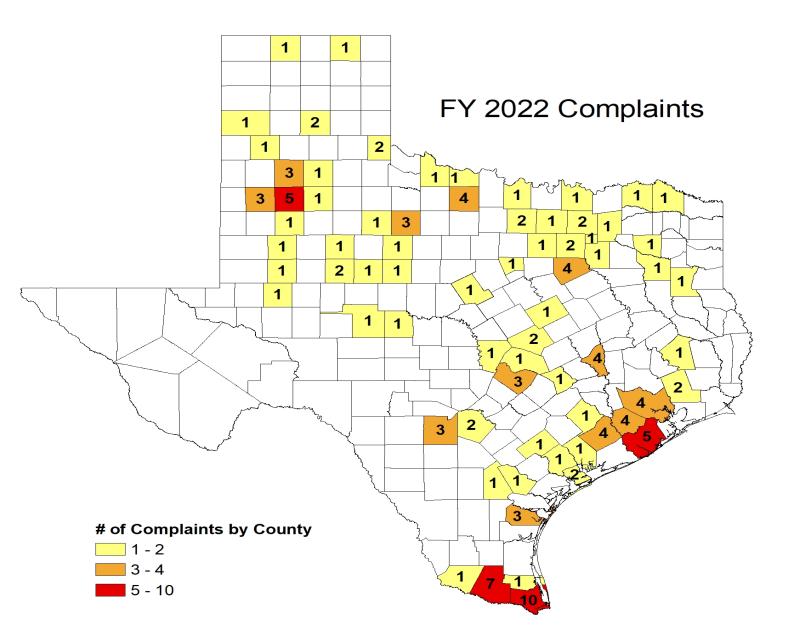

27 Agricultural Inspectors
 15 Structural Inspectors
 254 Counties in Texas

 They also conduct thousands of routine inspections on applicators, dealers, and businesses every year

192 complaints were received in 97 out of 254 TX counties

HOW MANY IN 2021 WERE **AERIAL COMPLAINTS?** •27 of 193 •About 15% Aerial Complaints 2020 •24 of 201 complaints (About 12%)

2022 135 complaints

Reasons complaints were low-Drought has caused less spraying as crops fail and inputs have gotten more expensive
